JASON S. DAVIS

Software Engineer

(912) 224-9571 jason@notthatjason.com https://github.com/jsondavis

PROFESSIONAL SUMMARY

Versatile full stack software engineer adept at learning new technologies and solving complex challenges. Experienced at collaborating in agile 3 to 7 person engineering teams and across departments to build and maintain performant web applications and backend services.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, Golang, Python, PHP, CSS3, SCSS, LESS
Frameworks & Tools:	React, Vue.js, NestJS, ExpressJS, Django, Webpack, Gulp, D3
Infrastructure & Cloud:	Docker, AWS (ElastiCache), MongoDB, PostgreSQL, Git, GitLab CI

PROFESSIONAL EXPERIENCE

EEL Datasystems

Contract Software Engineer Apr 2026 – Present

- Collaborate within a 5-person engineering team to maintain and optimize EEL's EDI and SFTP servers for critical business transactions.
- Streamlined production release processes, delivering the first EDI API production deployment within 3 months and establishing a consistent weekly/bi-weekly deployment cadence.
- Lead the infrastructure migration of EDI server caching environments from Redis Cloud to Amazon ElastiCache to maintain availability while reducing costs.
- Enhance API server performance and customer-facing web user interfaces to elevate overall product experience.

Fully Involved Logistics, LLC.

Operations Manager March 2025 – April 2026

- Managed logistics including staff, supplies, and trucks for approx 20 moving or packing jobs per month.
- Maintained website and phone services for brand visibility and customer communication.
- Managed Meta and Google ads to maintain brand presence and customer visibility.

Montra Technologies Inc.

Senior Software Engineer Sep 2022 – Sep 2024

- Partnered within a 3-person engineering team to enhance the Montra VIA platform, an internal IT management tool powered by NestJS, Vue.js, and PostgreSQL.
- Led the development of custom shipping and IT integration services across platform architectures.
- Introduced UI testing initiatives to maintain high system reliability, responsiveness, and seamless user experiences.

Vecima Technology Inc.

Software Engineer Jul 2021 – Sep 2022

- Worked as part of a 3-person development team to maintain and update the IQ platform’s Golang backend and ReactJS frontend.
- Managed containerized local Docker development environments and automated GitLab CI pipelines for efficient development and delivery workflows.
- Contributed to internal service analytics and testing frameworks to significantly boost system monitoring capabilities.

Scientific Games Corporation
Advanced Software Engineer Mar 2015 – Jul 2021

- Collaborated in a 7-person software engineering team alongside an external art agency to build both high-turnaround 3-month promotional campaign sites and long-term production platforms using ReactJS, Webpack, PostCSS, and GatsbyJS.
- Engineered and maintained multi-year, high-traffic production assets including mobile applications and state lottery "Bonus Zone" second-chance entry sites.
- Maintained and updated ExpressJS authentication and game-content hosting servers across long-term production platforms.
- Managed containerized local Docker environments and researched optimized deployment channels for game servers and promotional builds.

Turnstile Publishing Company
Web Developer Feb 2013 – Mar 2015

- Worked on a 3-person development team to create cross-platform mobile web applications for Golfweek and Golfstat using AngularJS deployed to iOS and Android via PhoneGap.
- Extended functionality of backend application components utilizing ExpressJS and Django.
- Managed user agent operations including publishing and maintaining app submissions on the iTunes App Store and Google Play Store.

EDUCATION

University of Georgia
Bachelor of Science (B.S.) in Biology - 2007
